

Abstract of the Disclosure

5 A communication system for an organization having multiple sites
uses a dual-mode device capable of both cell phone communication and
telephone communication on a local area network (LAN). IP LANS are
established at organization sites such that a temporary IP address is assigned
to a dual-mode device that logs onto an organization LAN, and the IP
address is associated at a PSTN-connected server on the LAN with the cell
10 phone number of the communication device. The IP server notifies a
PSTN-connected routing server when a device logs on to a LAN, and also
provides a destination number for the IP server. Cell calls directed to the
device are then redirected to the IP server and directed to the device
connected to the LAN.
